Project Name	Personal Expense Tracker Application

## I Create Flask Project

The screenshot shows the Visual Studio Code interface with a Flask application running. The editor displays the `app.py` file, which contains the following code:

```
1 from flask import Flask, render_template
2
3
4 app = Flask(__name__)
5
6 @app.route('/')
7 @app.route('/register')
8 def registrationpage():
9     return render_template('register.html')
10
11 @app.route("/success", methods=['POST'])
12 def success():
13     return render_template('success.html')
14
15 if __name__ == "__main__":
16     app.run(debug = True)
```

The terminal output shows the following messages:

```
* Serving Flask app 'app'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 826-870-943
```

The interface also shows the file explorer on the left with the project structure:

- OPEN EDITORS
  - app.py
- ASSIGNMENT1
  - \_\_pycache\_\_
  - templates
    - register.html
    - success.html
  - app.py

The status bar at the bottom indicates the current file is `Ln 13, Col 43`, using `Spaces: 4`, `UTF-8` encoding, and `CRLF` line endings. The Python version is `3.10.4 64-bit`.
